What makes design

ACCENT

Accent lighting adds drama to a room by creating visual interest. As part of an interior design scheme, it is used to draw the eye to house-plants, paintings, sculptures and other prized possessions. It can also be used to highlight the texture of a brick or stone wall, window treatments or outdoor landscaping.

To be effective, accent lighting requires at least three times as much light on the focal point as the general lighting surrounding it. Using this plan will create an atmosphere that is perfect for any room and more importantly serve to provide functionality, practicality for the space and activities one undertakes in it.

AMBIENT

Firstly, ambient lighting provides an area with overall illumination. Also known as general lighting, it radiates a comfortable level of brightness without glare and allows you to see and walk about safely. It can be accomplished with chandeliers, ceiling or wall-mounted fixtures, recessed or track lights and with lanterns mounted on the outside of the home. Having a central source of ambient light in all rooms is fundamental to a good lighting plan.

TASK

Secondly, Task lighting helps you perform specific tasks, such as reading, grooming, preparing and cooking food, doing homework, working on hobbies, playing games and balancing your chequebook. It can be provided by recessed and track lighting, pendant lighting and under cabinet lighting, as well as by portable floor and desk lamps. Task lighting should be free of distracting glare and shadows and should be bright enough to prevent eye strain.

How we work

We leverage our considerable experience in technical and lighting design to help formulate our client's expectations so that they can enjoy the rewards from a tailored design.

To us, the long term relationships that we build with our clients are far more important than the individual projects we deliver for them, and so we've built out team around a senior level of experience in order to deliver projects that are of the highest quality.

A passion for great design

We never settle for second best. At Noon lighting, great design means three things:

Looks great

We create designs that are eye catching and memorable. Our work helps our clients stand out from the "un-memorable" creating lasting impact and value.

Works great

Our work is focused in delivering the latest lighting designs and insuring the design can be achieved via the highest standards of technical skills.

Feels great

Lighting should not only enhance your environment but also directly improve your wellbeing.

Our process

We've refined our design and development process over many years. Structured enough to be consistent, yet flexible enough to be adapted to any project, it's a robust system that's proven to work.

Discovery and planning

The first stage in the process is discussion, working closely with you to establish your lighting objectives. We discuss a range of topics to gain deeper insights including identifying special areas of interest, control methods and colour options.

Review and quotation

This is where we bring together all the requirements and deliverables discussed in step one, from this we can produce a design cost for your project. On acceptance a 50% deposit is required.

Layout of design

A dedicated designer will now start creating your design, this process normally requires 14 days to complete, we will add any additional features from your plans if needed so nothing is missed.

Review of design layout

Once we are happy, the lighting layout is given over to yourself for review. We would run through all aspects of the design ensuring all points have been fulfilled. If any tweaks are required these would be noted and changed. Final balance is now required.

Final design package

With any tweaks made, we then produce the full design package, you will receive the complete design to use for your project. A full breakdown of equipment and fittings will be issued alongside costings for any control system installation and programming services.

Support services

This is the most important stage, we pride ourselves on being there throughout the installation process right up to completion. We offer remote support as standard or an on-site service such as installation, programming or both.

Capability

Noon has a reputation for creating lighting designs that are timeless classics, merging elements of brilliant creativity with a sensitive sympathy with the architecture, interior design, and 'story' within every project.

Our core focus is in lighting designs for luxury homes and gardens around the world, with the ability to work with any style of interior, ranging from opulent classical residences to cutting edge contemporary architectural masterpieces.

An award-winning combination: natural design talent, cutting-edge technology, and the latest global products all merged in with many years of experience and expertise.

What makes us

People - Constant training and partnering with world-class supplies.

Values - Treat all as equal with respect, helpfulness, respect and humility.

Products - Only personally vetted products make it through, design and technical lead.

Approach - Systematic and refined over time, delivering everytime.

Services

World-class lighting design

Extensive project management
